

## Mesotherapy Charlottetown

Mesotherapy Charlottetown - Mesotherapy was developed by Dr. Michel Pistor, a Frenchman during the 1950's. It is a non-surgical cosmetic medical treatment used for getting rid of cellulite, treating sagging and aging skin, promoting weight loss and to rejuvenate the skin in the neck and the hands. It has also been used to treat stretch marks, wrinkles and scars.

Mesotherapy has become among the world's most popular treatments. It works by making use of multiple injections of homeopathic medications, plant extracts, vitamins and pharmaceutical ingredients amongst others into the subcutaneous fat layer. These injections are reputed to target adipose fat cells by the nature of inducing lipolysis, or cell death and rupture amongst adipocyte cells.

Mesotherapy has a reputation of affecting the fat deposits inside the body by breaking down the connective bonds of adipose fat cells. The newly broken down adipose tissue is then naturally flushed out of the body and a more even skin tone is one of the results. The patients are able to erase cellulite and have their target parts become smooth once more. Among the most common areas on the body to be given Mesotherapy comprise the thighs, the area under the chin, abdomen, legs, hips and arms.

One of the draws to Mesotherapy is that is normally a minimally invasive procedure. Treatment sessions rarely take longer than 15 minutes to a half an hour to complete. The treatment involves stimulating the mesoderm, or middle layer of the skin using special mixtures of vitamins, minerals, homeopathic and traditional pharmaceutical medicines. The concentration of these components is personalized and based on the patient's individual requirements. Generally, a series of treatments is undergone so as to attain the best outcome. Injections are generally spaced out over 1 to 2 week intervals, and most treatments do not take any longer than one hour to carry out. Depending on the area being treated and the size and complexity, the particular number of treatments could vary from 4 to 15.

Since Mesotherapy injections are particularly targeted on the body, only a tiny amount of medication is required to bring about instantly visible outcome. Another benefit is that patients could avoid many of the side effects that often accompany orally administered medications or more risky surgically invasive methods.

Mesotherapy has recently become popular within North America. In other parts of the world such as Europe and South America, the treatment has been obtainable for numerous years and has earned a successful reputation. Mesotherapy is used mainly as a safe choice to liposuction, although, it has been efficient also for the cure of arthritis and muscle spasms. There are some clinics which specialize in Mesotherapy for face-lift methods and other specific tasks like for instance eyelid surgery. These treatments are called Meso-lifts.

### Mesotherapy Side Effects

Many possible clients wonder if they would feel pain during or after the treatment. Mesotherapy injections are just as uncomfortable as whichever injection. A lot of clinicians can offer a topical numbing cream or use numbing injections before the treatment as Mesotherapy comes in a series of injections. The main side effect is soreness, as though you had just finished a strenuous exercise. Knots in the injection part are one more common side effect and this is considered normal. The knots represent that the Mesotherapy is dissolving your cellulite and the treatment is doing its job.

One common side effect of the treatment is bruising. Usually, the bruising will disappear in approximately one week. Arnica Montana, a homeopathic remedy, could be administered, either orally or topically or both on a daily basis to help speed up the process of healing.

### Length of Mesotherapy Results

Results for Mesotherapy treatment typically last at least a year. It is extremely important for patients to maintain a healthy way of life in order to keep their figure. Of course, any extra weight one gains after a Mesotherapy treatment will have an effect on their body's shape.

### Recovery Time

It is common for patients to rest for a day or so after treatment. It is suggested for patients to massage the treated areas in order to help alleviate any soreness and help disperse the injection throughout the part.

### Various Names for Mesotherapy

Mesotherapy has been called by various names including: Cellulite Removal Injections, Cellulite Removal and Cellulite Reduction.

### Overall Advantages over Surgical Methods Like Liposuction

Mesotherapy does not require any general anaesthesia, hospitalization or downtime. Mesotherapy treats cellulite directly, while liposuction does not treat cellulite, and usually causes existing cellulite to appear more prominent. Mesotherapy reduces fat in selected areas and this promotes smoother skin. As the fat deposits are flushed from the body, they do not reappear in different areas that unfortunately, normally happen after liposuction.
