

## Acupuncturist in Charlottetown

Acupuncturist in Charlottetown - Intravenous therapy or likewise called IV therapy is the giving of substances straight into a vein. Intravenous therapy may be used to deliver medications, for blood transfusions and to correct electrolyte imbalances. It can also be used as fluid replacement to correct, like for instance, dehydration. The intravenous route is the fastest method to deliver fluids and medications all through the body. Some medications, along with lethal injections and blood transfusions, could only be given intravenously.

Vitamin C Intravenous therapy is an alternative treatment utilized conditions including cancer. A lot of centers dedicate certain treatment regimens, though there is still some controversy surrounding this type of remedy. Amongst the reputed effects of Vitamin C therapy comprise: prolonging survival and increasing the quality of life. Vitamin C is effective in preventing systemic free radical injury and corrects a lack of ascorbic acid, which is normally found in people who have cancer. Vitamin C inhibits hyaluronidase. This is an enzyme made by cancer cells that is responsible for the breakdown of healthy tissue, resulting in tumor progression and metastasis. Vitamin C also works synergistically conventional with various conventional cancer treatments.

Vitamin C, also referred to as L-ascorbate or L-ascorbic acid is an extremely crucial nutrient for humans and many different animals. It acts as an antioxidant and protects the body against oxidative stress. Vitamin C is likewise a co-factor in at least 8 enzymatic reactions consisting of different collagen synthesis reactions which lead to the most severe symptoms of scurvy when they are not working properly. In animals, these enzyme reactions are extremely important in preventing bleeding from wound-healing and capillaries.

### Vitamin C Mega Dosage

There are several groups and people who advocate large doses of Vitamin C, more than ten to one hundred times more than the Recommended Daily Intake or RDI. They take these amounts either orally or intravenous therapy. There have yet to be large, randomized clinical trials on the effects of high doses done on the general people. Linus Pauling spent a large portion of his life supporting the use of mega doses of vitamin C. He thought the established RDA was adequate so as to prevent scurvy but not necessarily a high enough dosage for optimal health.

A mega dose of Vitamin C continues to be and has been utilized so as to prevent and treat lots of various illnesses, amongst which comprise coronary disease, the common cold and cancer. Current recommendations for Vitamin C are anywhere from 30 - 100 mg on a daily basis. Individuals taking a mega dose can ingest anywhere from 500mg to 1000 mg a day but the side effect of diarrhoea may be a common problem for those who ingest large amounts.
